

Final Project Report

Name: Jillian Sleiman

Course: Web 2890

Project Title: Project 2

Date: 7/25/2025

Project Reflection

What I'm Most Proud Of:

I am most proud of the color palette and the cards section and the footer.

What I Could Have Done Better with More Time:

I could have done better on the search bar and the nav menu and making the website feel more updated.

Changes Made Based on Critiques

Critique 1:

- Feedback: The contact page looks outdated with extra loose text.
- Change Made: I got rid of the loose text and it looks better.

Critique 2:

- Feedback: The text is not centered with the other text on the about page.
- Change Made: I centered the text on the about page to match the rest of the text.

Critique 3

- Feedback: The website seems a bit old/outdated.
- Change Made: I added some emojis and fun facts to the about section.

Resources and Assets Used

I used tools and resources like Unsplash for images, Adobe Color for picking my color palette, Font Awesome for icons, and Google Fonts for typography.

Key Design Decisions

- **Layout:**
I went with a clean, grid-style layout to keep everything simple and easy to find. It helps users focus on the recipes without distractions and works well on both desktop and mobile.
- **Color Scheme:**
I chose warm, earthy colors like soft yellows and browns to give the site a calm, welcoming feel. They're easy on the eyes and help keep things looking natural and friendly.
- **Typography:**
I used simple, rounded fonts that are easy to read and feel approachable. Headings stand out, and the body text is clean and perfect for a family friendly site.
- **Navigation:**
The navigation is super straightforward. It's always at the top, easy to reach, and the menu labels are clear. On mobile, it turns into a hamburger menu to keep the screen tidy.

Framework Customizations

I designed the layout from wireframes I made in Balsamiq, then built everything with HTML and CSS. I used a card design for the recipes, picked colors with Adobe Color, added fonts from Google Fonts, and used Font Awesome for icons.

Advanced Features

- **Media Queries:** I used media queries to make sure the site works well on different screen sizes, so it looks great on both phones and desktops.
- **Hover Effects:** Added simple hover effects on buttons and recipe cards to give users clear visual feedback.

Problems Experienced

I had a hard time making the search bar look good while keeping things simple. Also, I wanted the site to feel fresh and modern, not old-fashioned. Plus, time was tight, so I had to focus on the important stuff and keep the design clean.

Final Thoughts

I learned a lot about keeping designs simple and user-friendly. Getting feedback was super helpful, and I enjoyed making something that could really help busy parents. Can't wait to keep improving!
